

Tie Line Definition for OA & OATT

Augustine Caven
Generation Department
Metering Task Force
June 15, 2016

- PJM Legal advised inclusion of the new Tie Line Definition language within the PJM OA and OATT governing documents in support of the planned PJM Manual M-01 Tie Line definition language additions that will be reviewed by the Metering Task Force.
- This is in line with standard PJM objectives to ensure that PJM's governing documents are in line with the PJM manuals.
- PJM believes that this will enhance the importance of the Tie Line definitions being added to Manual M-01 by memorializing them as well in the OA & OATT.

Tie Line:

“Tie Line” shall mean a circuit connecting two balancing authority areas, control areas or electric system regions. Tie Lines may be classified as external or internal as set forth in the PJM Manuals.
