- April 23, 2015 – MRC endorsed
- ***May 21, 2015 – MC vote***

- From the Phase 1 Matrix...
 - 5 – LOC Credit Methodology
 1. Use the schedule the resource is committed on for energy as the reference for LOC unless the resource is self-scheduled. If self-scheduled, use the **higher of** the available cost or price curves.
 - Applies to energy, reactive and CT LOC
 2. LOC for reactive services and energy should be an integration up the curve as opposed to $(LMP - Offer) * Reduced\ MW$
 - Applies to energy, reactive and CT LOC
 - 5a – LOC for resources committed in DA but not run in RT
 1. Include startup and no-load costs in the DA offer used to calculate CT LOC.
 2. *Change the eligibility of this payment to resources that meet the defined operational criteria rather than just falling in an asset class – included in original package, but not endorsed by MRC*
