

Clean Attribute Procurement Senior Task Force Monthly Progress Report

September 18, 2023

1. Procurement of Clean Resource Attributes

Issue Status

Temporarily Suspended

Target Completion

June 2023

Progress Update

The senior task force has completed an analysis of conceptual clean attribute market designs and stakeholders have proposed three (3) solution packages. Packages A and B have been submitted by OPSI's Clean Policy Achievement Working Group, and Package C has been proposed by Vistra. A vote on the packages took place between May 31st and June 9th. In addition, stakeholders completed a poll question related to deferring additional work on clean attribute proposals until after the Critical Issue Fast Path process on resource adequacy has completed.

The results of the CAPSTF vote were reported to the MRC in June where no package received the simple majority in order to pass. The poll question issued demonstrated support to suspend discussions on all clean attribute procurement market concepts until the Critical Issue Fast Path process on capacity market reforms has been completed. The CAPSTF will resume September 22nd, 2023.
