

Additional Manual 12 Language needed for October 1st

Rus Ogburn
RPSTF
August 23, 2012

RPSTF proposed Manual Language for M12, M11 and M28 for the October 1st go-live.

- An additional change is needed to ensure the Regulation Requirement reflects the effective MWs to be consistent with the 205 Filing.
- This regulation requirement will be adjusted in stages to convert to effective MWs as part of the Performance Based Regulation changes.
- This approach will utilize the RTO wide average performance scores leading up to the transition making changes in stages.

- RPSTF has discussed but never created language for treatment of regulating resources during a synchronized reserve event.
 - Resources will still be compensated as described in Manual 11, Section 4.2.11
 - The regulating resources will be expected to return to the resource's regulating band within 2 minutes of the end of the Synchronized Reserve event.
 - Performance scores for all regulating resources in that reserve zone will be null for the time period during and for 2 minutes after the end of the event.

- August 23rd first read MRC of additional language needed for go live
- September 7th present additional language to RPSTF and ask for objections
- September 27th present additional language to MRC and ask for endorsement
 - Effective date for the additional language will be October 1st.
