

Additional Manual 12 Language needed for October 1st

Rus Ogburn
RPSTF
Sept 27, 2012

- August 23rd first read MRC of additional language needed for go live
- September 7th present additional language to RPSTF and finalize changes
- September 11th present at OC
- September 27th present additional language to MRC and ask for endorsement
 - Effective date for the additional language will be October 1st.

RPSTF proposed Manual Language for M12, M11 and M28 for the October 1st go-live.

- An additional change is needed to ensure the Regulation Requirement reflects the effective MWs to be consistent with the 205 Filing.
- This regulation requirement will be adjusted in stages to convert to effective MWs as part of the Performance Based Regulation changes.
 - The values will range from 0.78% to 0.70% of the load forecast.
- This approach will utilize the RTO wide MW-weighted average performance scores leading up to October 1.

- Proposed language will suspend regulation performance scoring from the start of an event until 10 minutes after a Synchronized Reserve event.
 - The regulating resources are expected to return to the resource's regulating band as soon as possible after the Synchronized Reserve event.
 - Provides a balance between response to a Synchronized Reserves and regulation performance.
- Update to M12 Section 4.1.2 to clarify the expected response of regulation resources during an event.
