

Modification to approved Residential Measurement and Verification rule changes

Peter Langbein
Manager, Demand Response Operations
MRC Meeting
April 23, 2015

- MC approved changes:
 - 2016/17 Delivery Year - Residential measurement and verification will be based on load data from sample of interval meters deployed in the field instead of a static analysis
 - Leverage existing C&I process.....but use sampling
 - 2016/17 and 2017/18 Delivery Year - Provide a transition plan if prior commitments can no longer be met because of new measurement and verification rules
- Modification
 - PJM does not expect to file at FERC until late April and therefore proposes to add 1 year to transition plan (2018/19)
