

Problem/Opportunity Statement

PJM EMS MODEL UPDATES AND QUALITY ASSURANCE MANUAL DOCUMENTATION

PROBLEM / OPPORTUNITY STATEMENT

PJM is retiring the PJM Compliance Bulletin that describes the process PJM members are to use to notify PJM of any change in the status of PJM Member Bulk Electric System (BES) elements as a result of the application of the NERC-approved BES definition; this process is currently covered in Manual 3A. The target retirement is scheduled for early March 2024. PJM will need to revise Manual 3A to remove the PJM Compliance Bulletin obsolete reference and align NERC-approved BES equipment related definitions.

PJM Manuals have been identified as having specific references requiring revisions:

- Manual-3A Energy Management Systems (EMS) Model Updates and Quality Assurance (QA)
