

Markets Gateway Roadmap

As of March 20, 2018

[Markets Gateway](#) allows users to submit information and obtain data needed to conduct business in the Day-Ahead, Regulation and Synchronized Reserve Markets.

Key Product Features

- View Market Results
- Manage Generation and Load Response Portfolios
- Manage Ancillary Service Data
- Manage Market Offers and Transactions

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
ALL added to XML query			◆ Train – 3/15 ◆ Prod – 4/4				■		■			
RT Value Exceptions			◆ Train – 3/15 ◆ Prod – 4/4									

Legend

- Start Date
- ◆ End Date

- Several participants have requested adding 'ALL' to the following new IDO queries:
 - QueryScheduleUpdate
 - QueryScheduleDetailUpdate
- The new IDO queries currently have the "location" and "schedule" as required attributes, which forces users to query every location/schedule combination in order to obtain a complete set of the data submitted to the market
- Target timeframe – March 15 for TRN, April 4 for PRD
- External Interface Specification Guide, v56 and XSD information is posted on the Markets Gateway Tools page

Area	Impact	Action Required
Browserless (XML API)	New XML Query Option Available for some queries	None - optional functionality. Users may update XML calls for the above queries after the production release.

RT Value Exceptions Detail

- With the implementation of Intraday Offers, and the ability to update offers hourly in Realtime, a method is needed to allow participants to request RT values exceptions in Realtime (after the DA close at 10:30 am).
 - Meant to capture a resource's current operational capabilities whenever it cannot operate according to its unit specific parameters (USP).
 - Requesting a RT values exception allows the user to then enter a RT value for short-term exceptions. RT values override any existing values
 - Parameters impacted by this enhancements are Minimum runtime and Notification time.
- Once this enhancement is implemented, updates can be made beginning at 13:30 (rebid) the day before the operating day, through 21:55 of the operating day, and 65 minutes before the operating hour.
- RT Exceptions will be for the day (i.e. if updated at 1830 then applies for hrs 0-24 the next day; if updated at 0900, updates also apply for the day). Multiple updates may be made throughout the day.
- Target timeframe for this enhancement is dependent on vendor availability and test results:
 - TRN – March 15, PRD – April 4

Area	Impact	Action Required
User Interface	Time dependent validation change only	None - optional functionality. Users may continue to use the Parameter Limits > Exceptions tab to submit RT Value Exceptions
Browserless (API)	No XML change	None - optional functionality. Users may continue to use the same XML query as today
