

# Offshore Wind Integration Update and JIPC Collaboration

---

*IPSAC WebEx*

Ross Altman

MANAGER, PUBLIC POLICY AND INTERREGIONAL PLANNING, NYISO

# Summary of Recent Activities

- In July 2021, JIPC received comments from Shell Energy North America and Clean Energy Advocates requesting a comprehensive study to evaluate potential benefits of an interregional transmission project for the integration of offshore wind.
- A special IPSAC meeting was held in October for the commentors to present their requests to stakeholders. General feedback at the meeting was supportive of an interregional study.
- Each ISO/RTO gave updates on their planning activities related to offshore wind integration at the June and October 2021 IPSAC meetings.

# Next Steps

- All 3 JIPC members are participating on the Technical Review Committee of the DOE Atlantic Offshore Wind Transmission Study.
- JIPC is discussing if additional interregional study work should be performed to complement the DOE study. Each region will inform stakeholders of the next steps in early 2022.
- JIPC will continue to collaborate by sharing studies and modeling data.
- JIPC will review if any potential interregional transmission project(s) will meet the regional needs of more than one region more efficiently or cost-effectively than separate regional transmission projects.
