

Distributed Energy Resources

MIC-DER

December 15, 2017

Skyler Marzewski

Monitoring Analytics

Aggregation

- **Relax minimum size requirements from 100kW to 1kW.**
- **Eliminates need for complicated aggregation rules with arbitrary limits of aggregation.**
- **Any resource that wants to participate as DER can participate.**
- **Cost allocation, specifically with use of transmission system, can correctly be assessed.**

Energy Offers Requirements

Two options

- **Unable to set price, act as a price taker**
 - **Have a pre set strike price**
 - **Need to verify strike price logic and level**
- **Able to set price**
 - **Have a cost based offer**
 - **Same requirements as all generation resources**

Addbacks for Capacity DER

- **Future discussion about DER in the capacity market.**
- **No addbacks during peak time periods for measuring capacity usage.**
- **Reduction in load will result in decreased capacity requirement.**
