

# A Review of PJM RTO Winter 2017/18 Loads

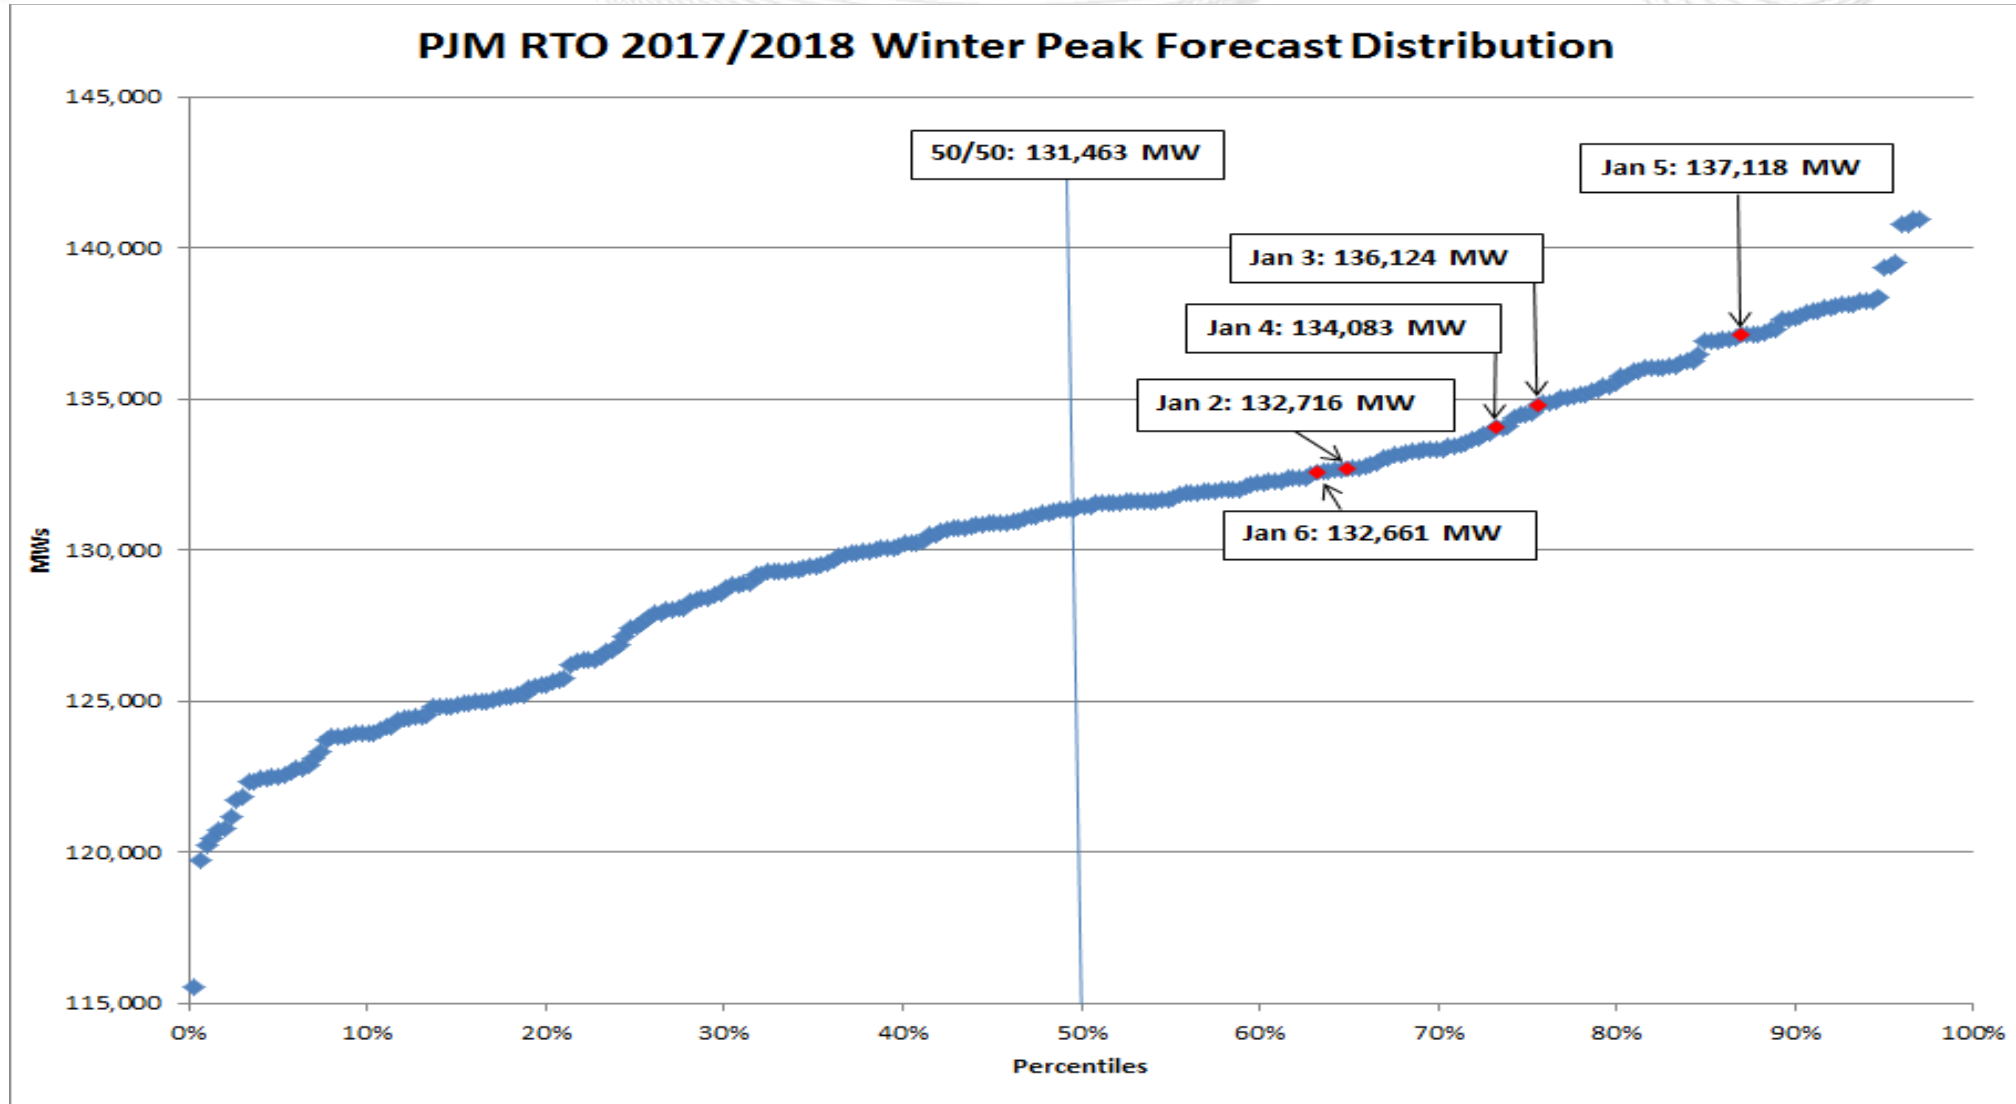

John Reynolds  
Load Analysis Subcommittee  
March 14, 2018

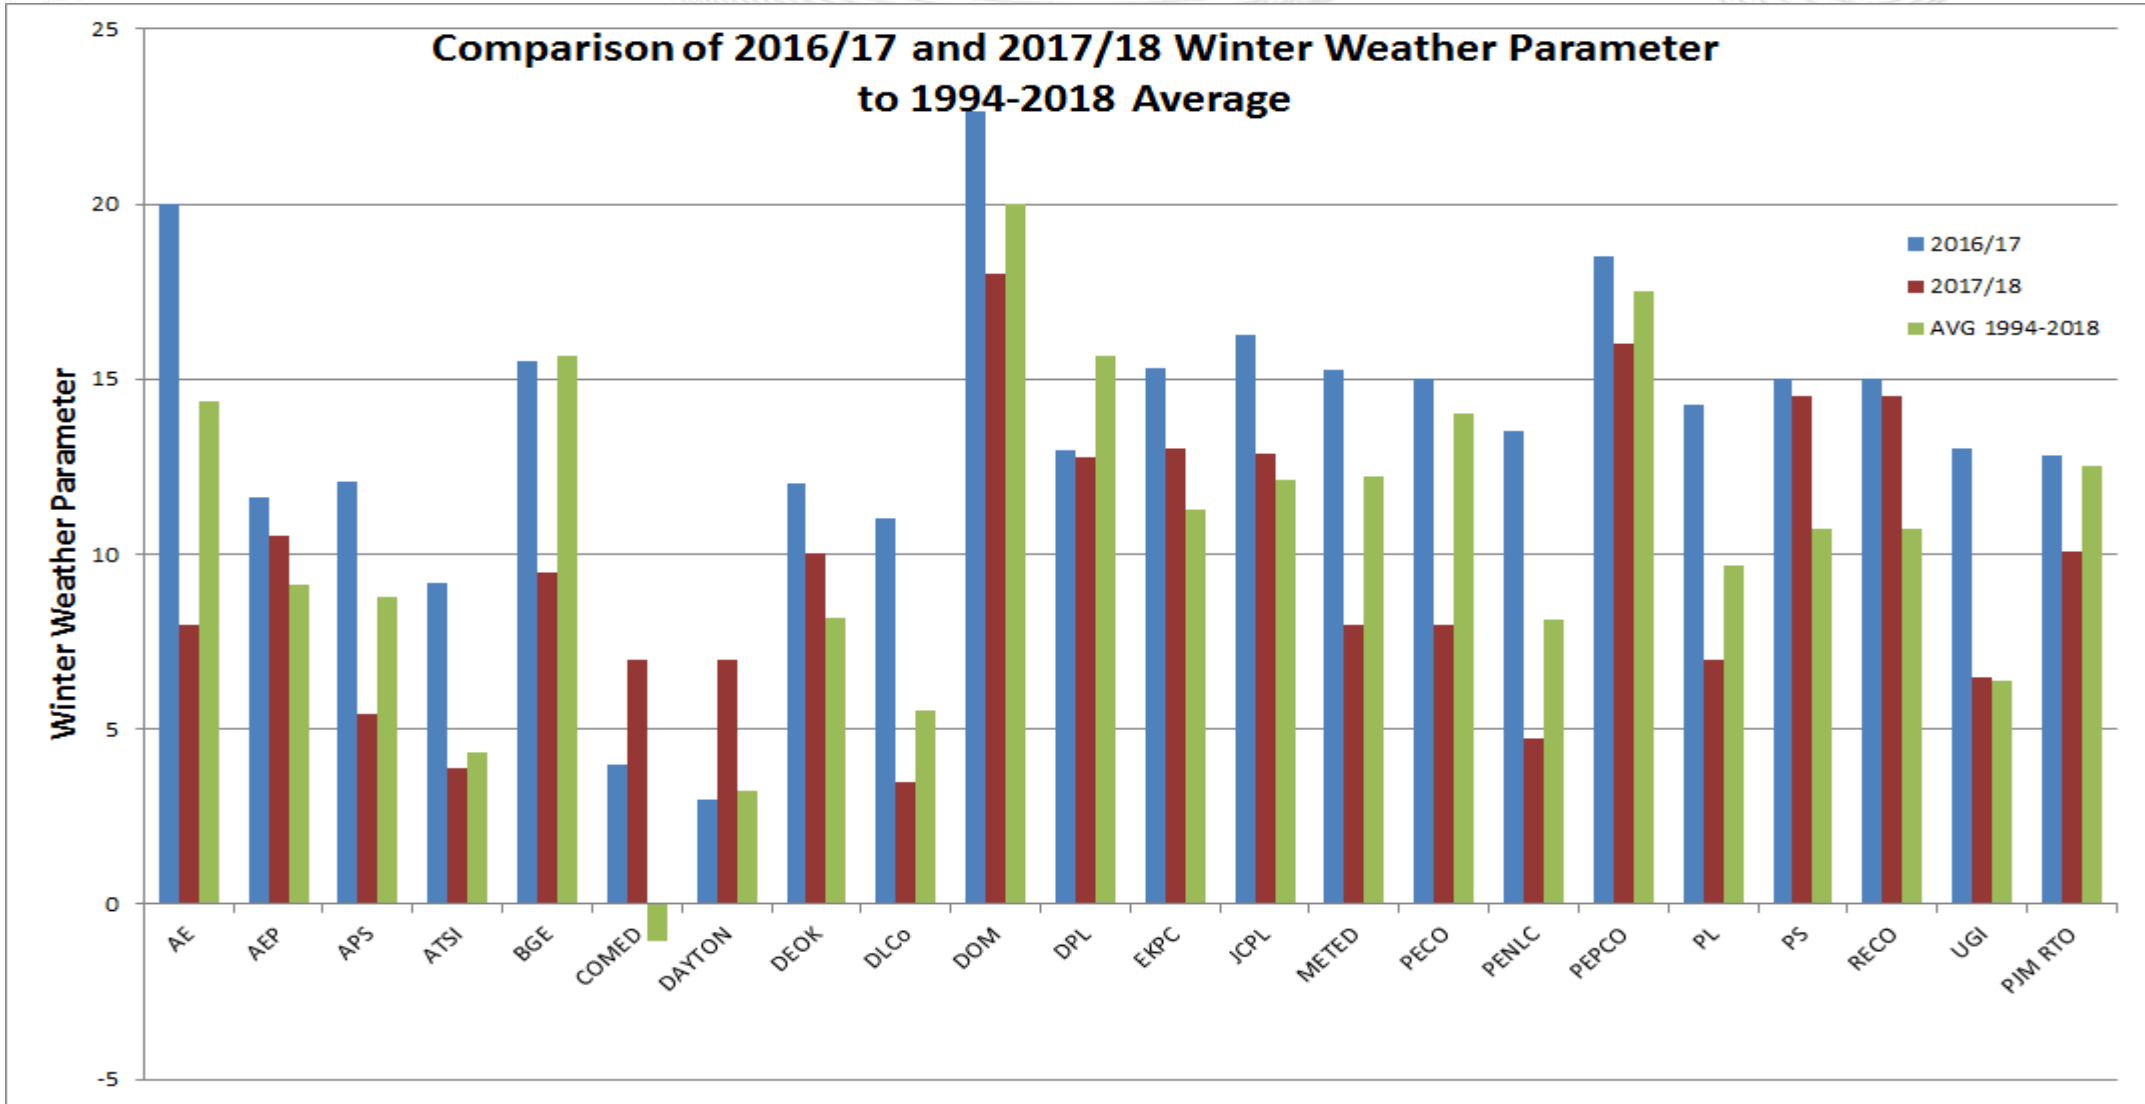

**Comparison of PJM RTO Preliminary Winter Peaks to Forecasted Peak Levels - 2017/18**

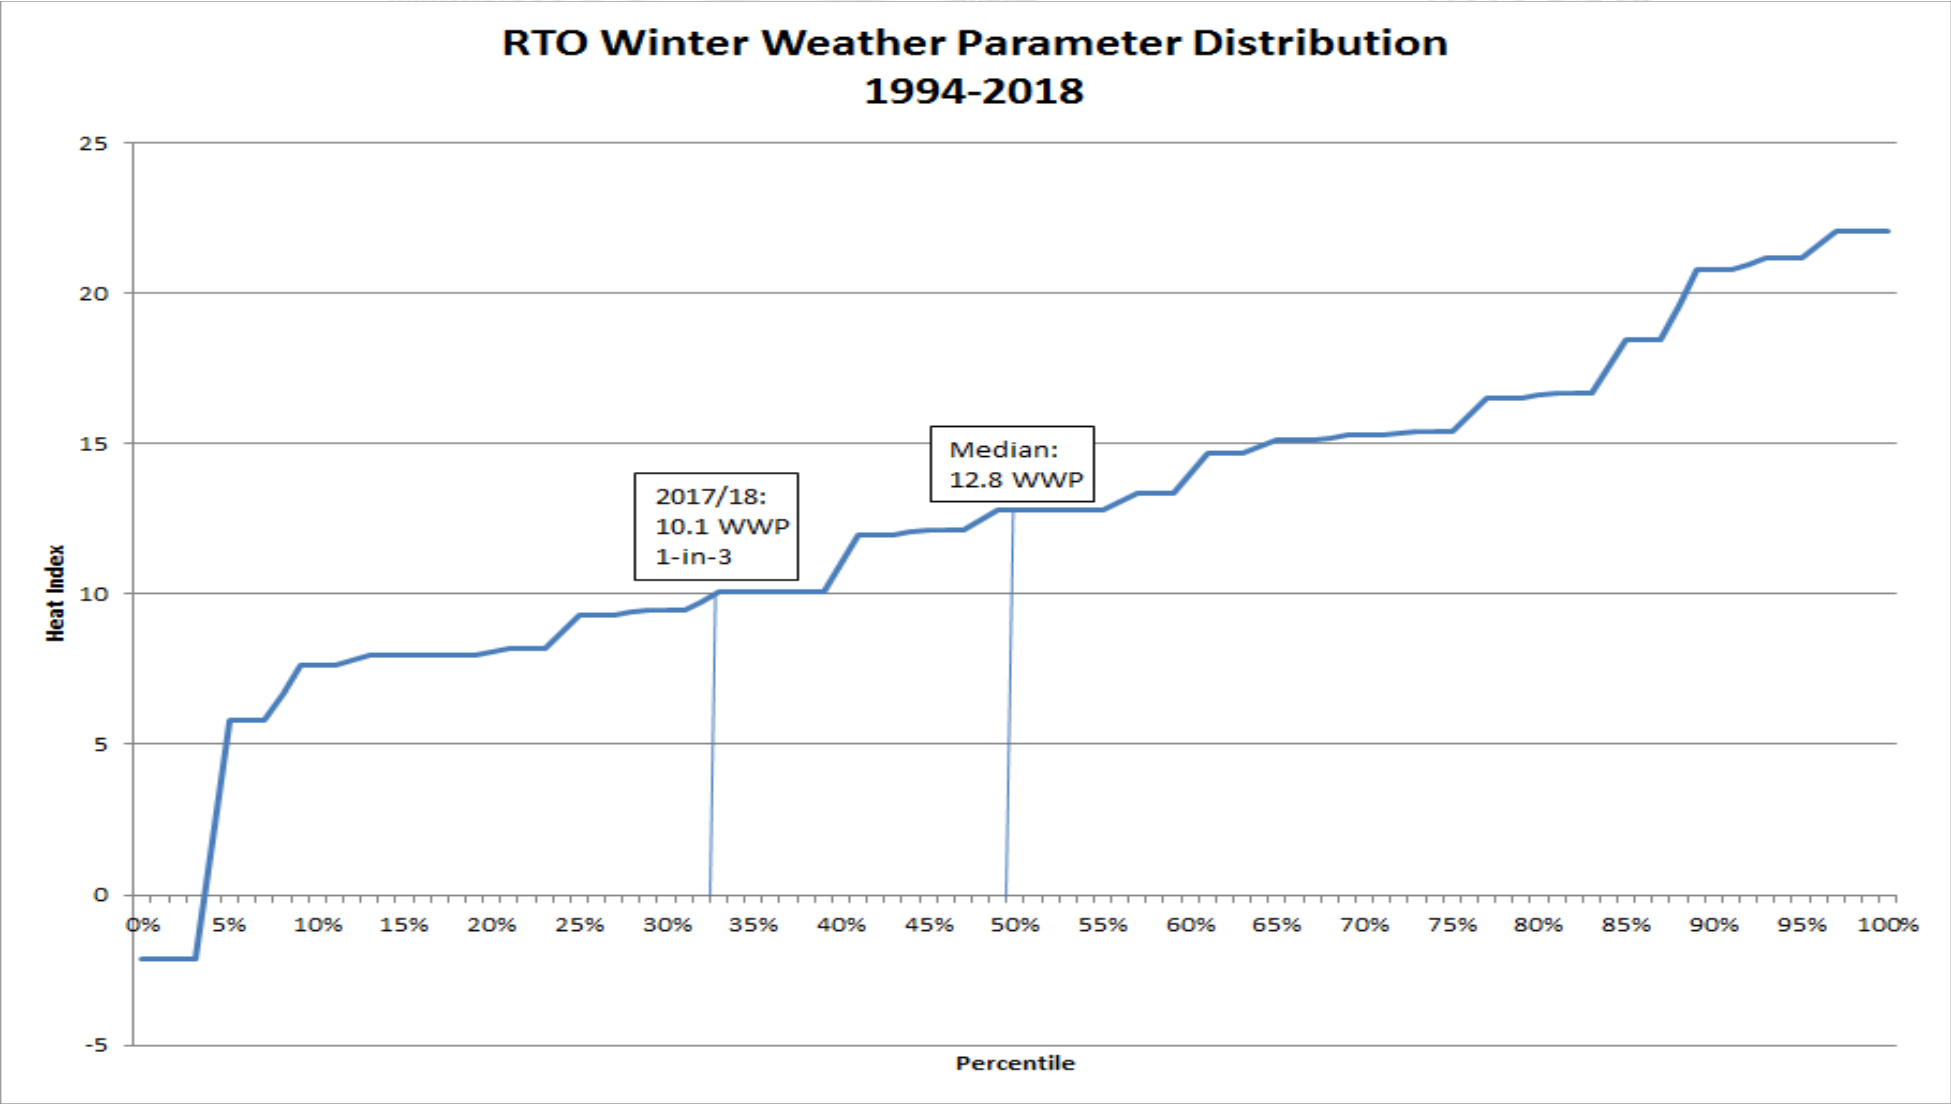

The PJM RTO WWP is for reference only and is estimated from weighted zonal contributions to the annual RTO peak.

- Peak load above previous year and forecast
- No PJM-declared Load Management events
- Weather: RTO Peak day wind-adjusted temperature lowest since second polar vortex, and roughly a 1-in-3 event. MAAC zones tended to be colder than normal, others warmer than normal.
- Peak diversity and normalized peaks will be available once final February load data is available
