

Summer 2021 Load

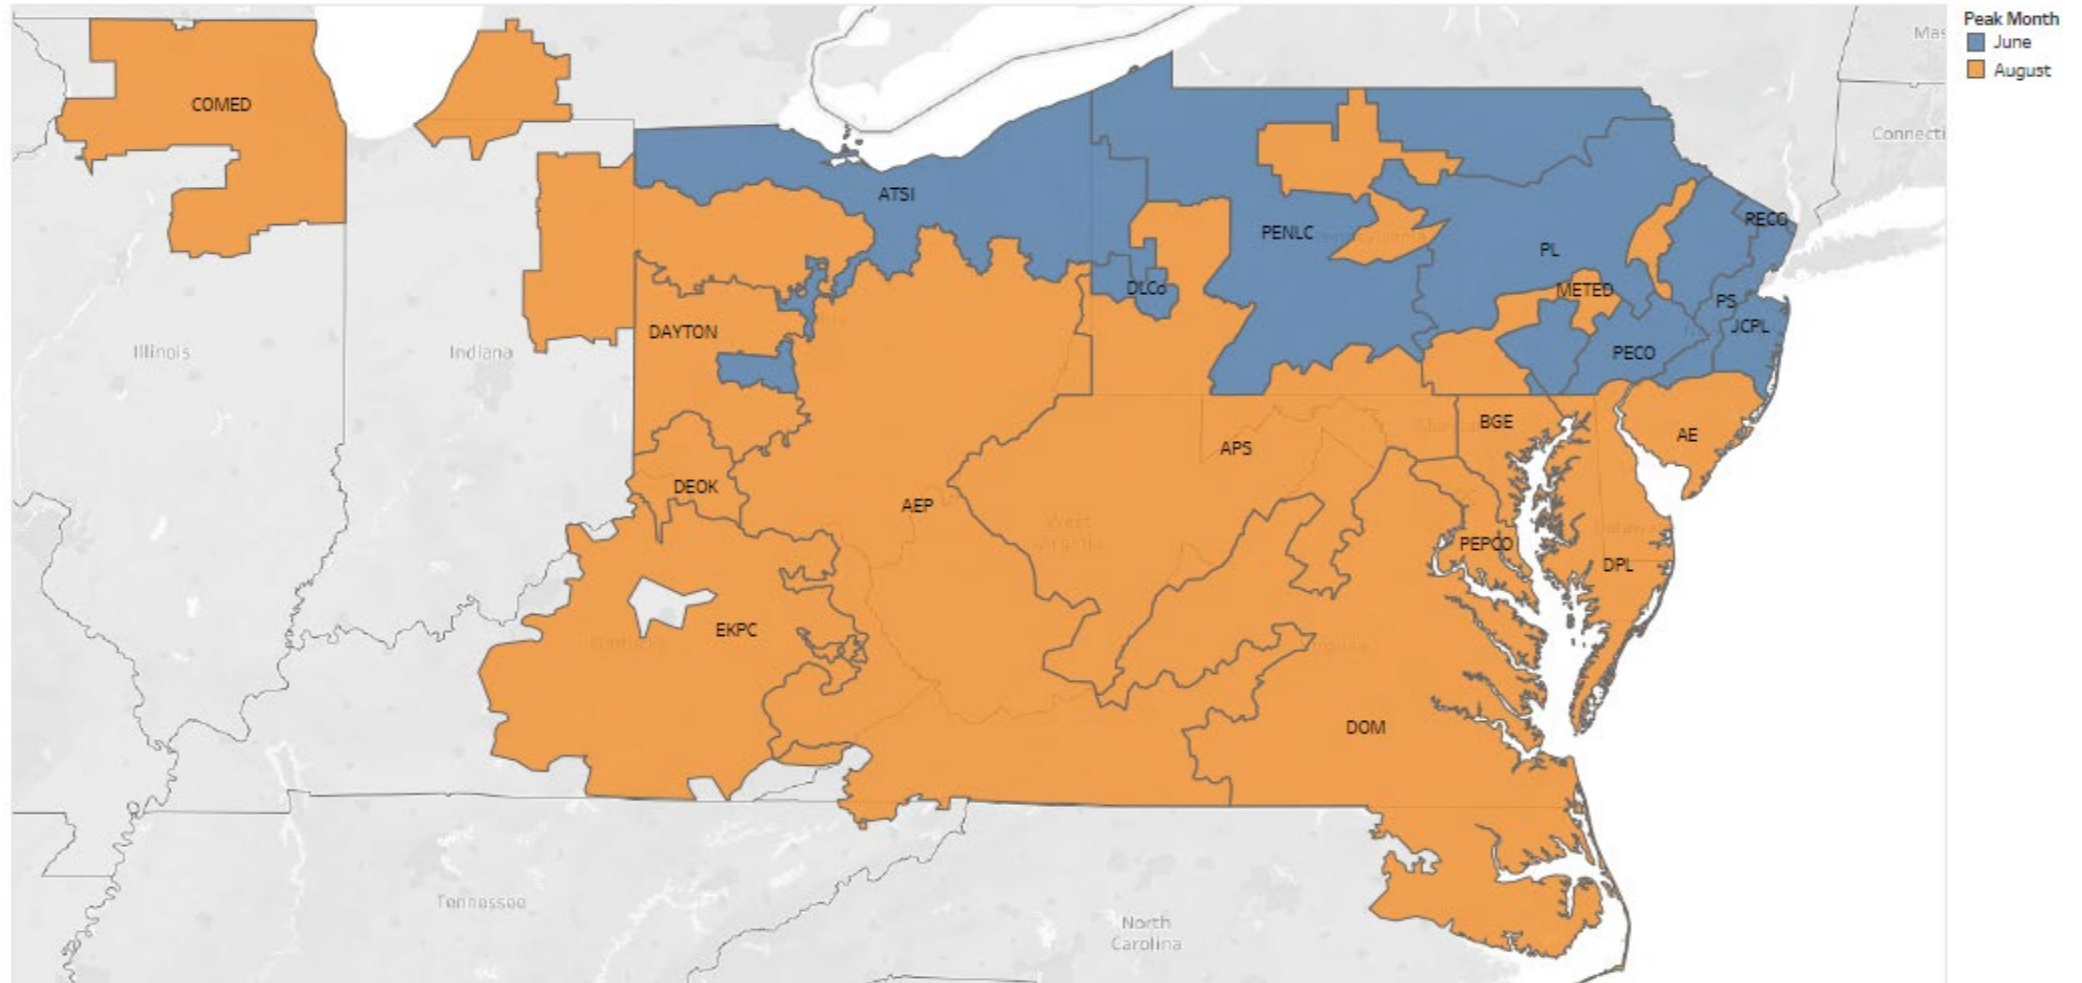

Load Analysis Subcommittee
September 3, 2021

John Reynolds
Lead Analyst
Resource Adequacy Planning

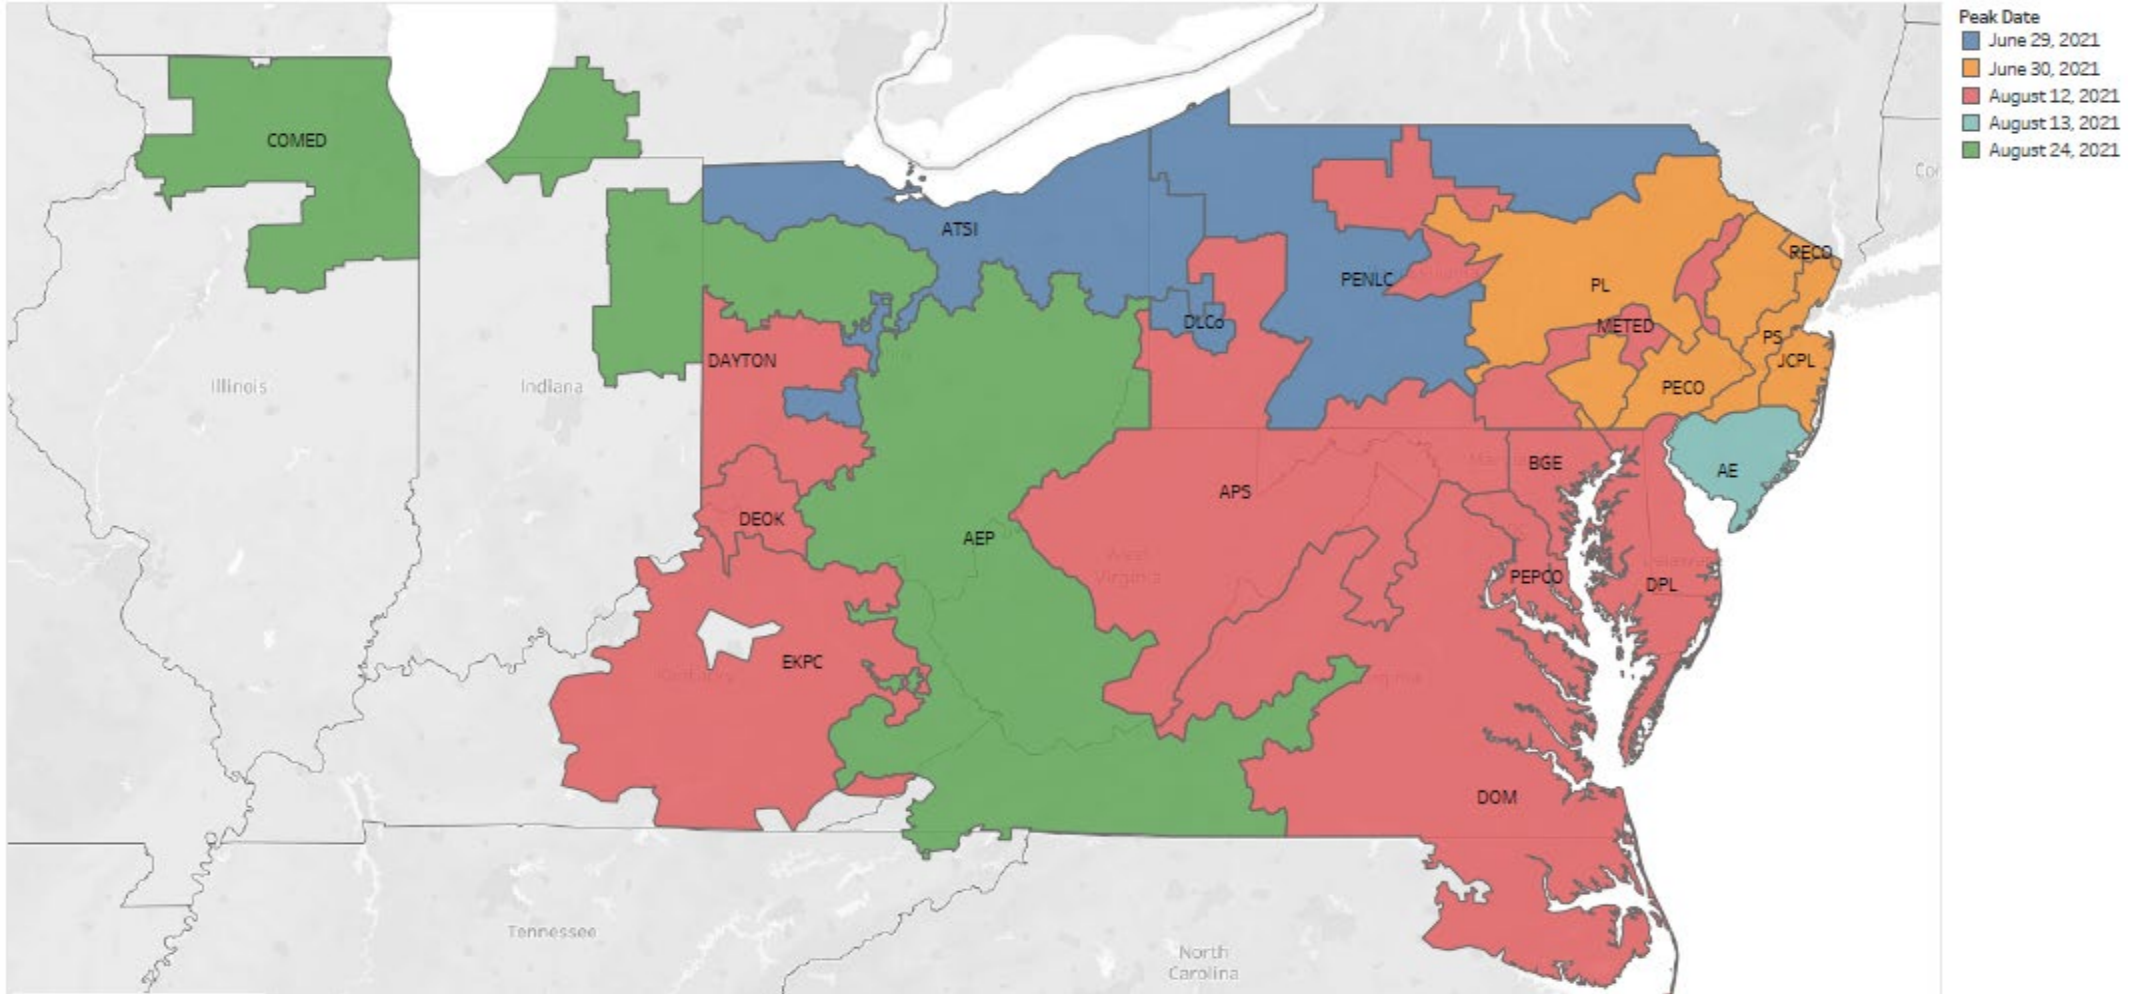

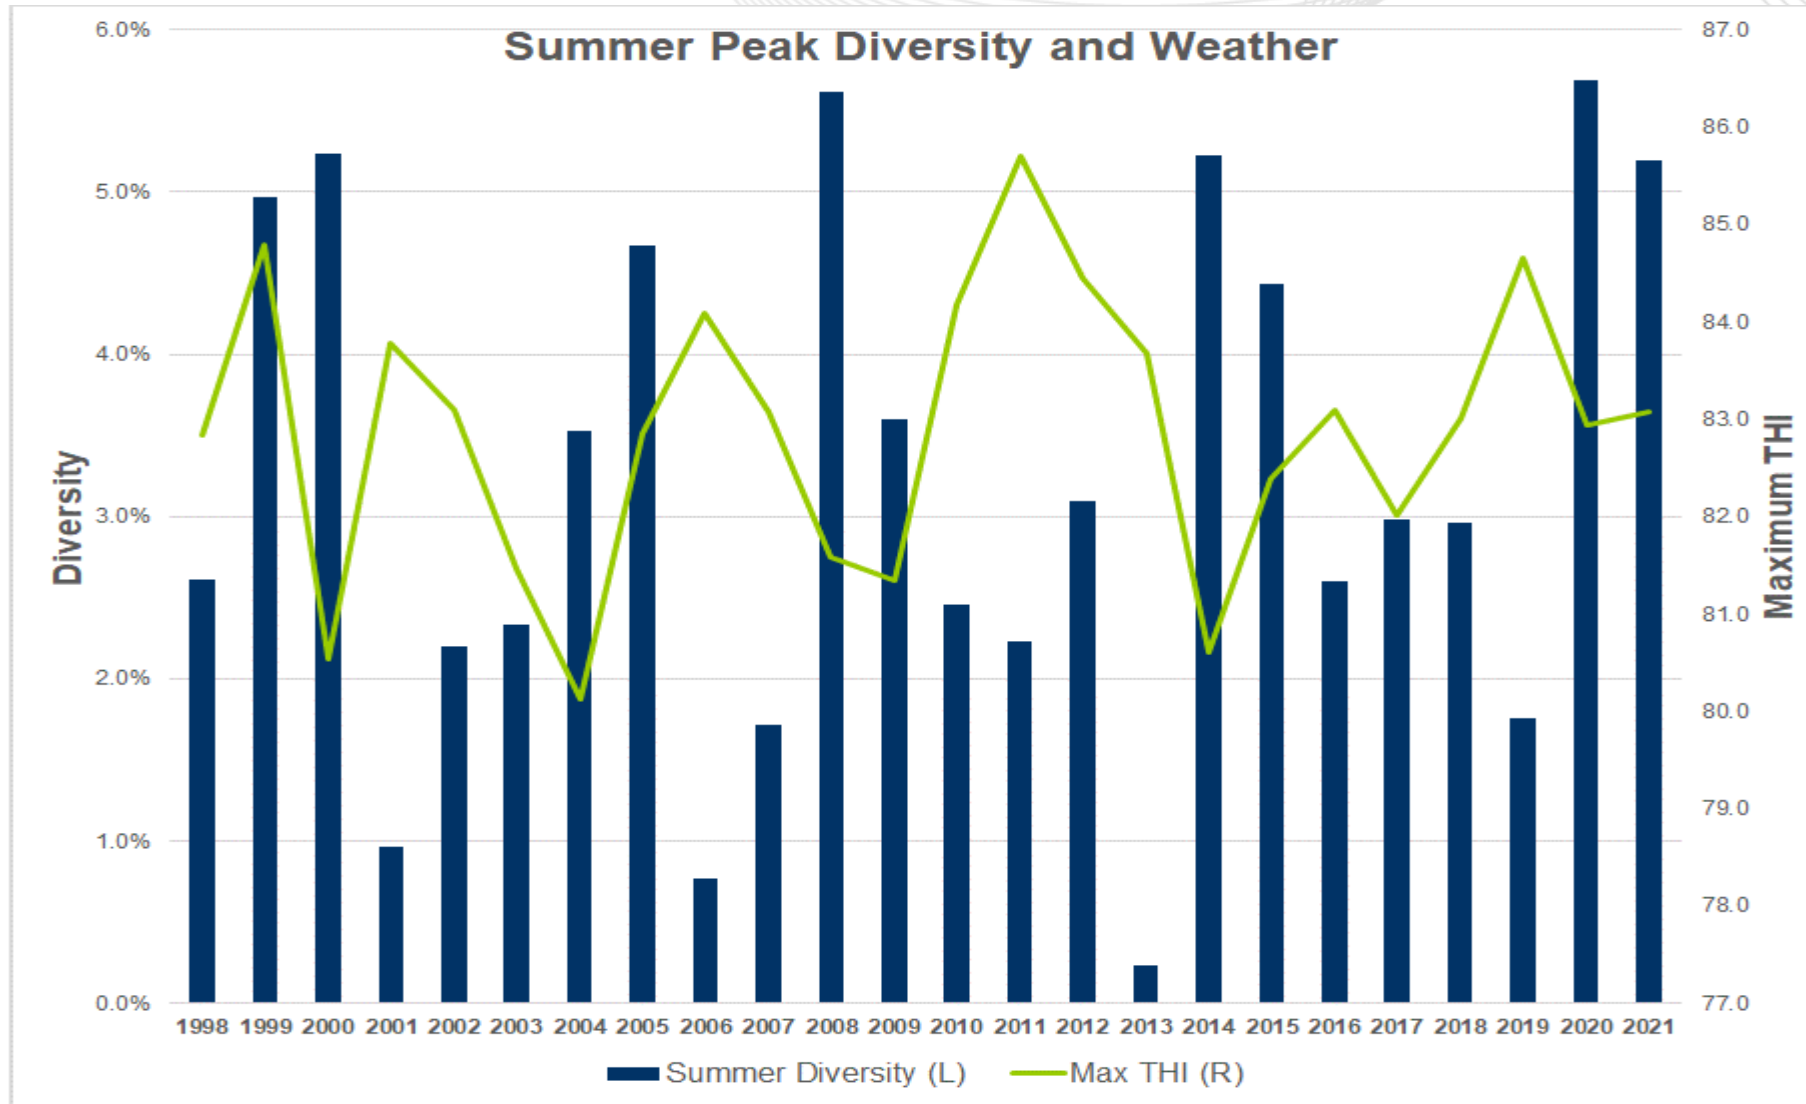

- Highlighted loads exceed 145,000 MW
- High loads occurred in June, July, August.
- **These loads are not official.**

Preliminary Summer 2021 Zonal Peaks by Month

Preliminary Summer 2021 Zonal Peaks by Date

- For second year in a row, normal peaking weather combined with above average diversity.
- Pockets within the footprint peaked on the same day, leading to high diversity.

- All loads are preliminary metered, not unrestricted. Official loads (including 5CP) will be available in mid-October.
- PJM initiated no load management events in summer 2021.
- Given equal weather conditions, 2021 daily peak was 1% higher than 2020 load.
