

# Other RTO Uplift

Laura Walter

December 20, 2013

- What is it?
  - Uplift is dispatching uneconomic units or backing down scheduled units in order to maintain reliability
- Why does it happen?
  - Transmission constraints and unit parameters
- Allocation?
  - Based on ratio share of load
- Any work to reduce?
  - 138kV modeling

- What is it?
  - Uplift is dispatching uneconomic units or backing down scheduled units in order to maintain reliability
- Why does it happen?
  - Transmission constraints and unit parameters
- Allocation?
  - Based on ratio share of load
- Any work to reduce?
  - None found

- What is it?
  - Net Commitment Payment Compensation
- Why does it happen?
  - Voltage control, constraints
- Allocation?
  - 4 allocation methods
- Any work to reduce?
  - Changes aligning with energy market flexibility changes

- What is it?
  - Revenue Sufficiency Guarantee
  - Price Volatility Make Whole Payment
- Why does it happen?
  - Due to deviations in real time
  - Disconnect between 5 minute LMP and hourly price
- Allocation?
  - Complex
- Any work to reduce?
  - Extended LMP mid-2014

- CAISO
- SPP
