

2024 Changes to the PJM Event CSV Format

Due to NERC adding a new reporting item called Contributing Operating Condition, the PJM Event CSV format has been revised to transmit the new data item:

Data Card	Utility	Unit	Year	Event Number	Event Index	Rev Code	Event Type	IO Code	Event Start	Event End	Available Capacity	Cause Code	Cont Code	Work Started	Work Ended	Man Hours	Desc.	Fail Code	Amp Code	Con Op Code	
97	312	101	2002	361	1	0	MO	0	10/9/2002 7:20	10/9/2002 23:30	0	4590	1				Gen brake work	F040	04	0	
97	312	101	2002	361	2	0						3900	2								0
97	312	102	2002	1	1	0	RS	0	10/1/2002 12:20		0	0	1								0

Each event occupies one or more rows, depending on the number of event indexes. The new Contributing Operating Condition code is applicable only to the Event Index 1 row.

For details on the Contributing Operating Condition code, please refer to the NERC DRI downloadable from the NERC website
