

RPM Pricing Points Definition Document

PJM posts reference prices at various points (i.e., RPM Pricing Points) in order to facilitate bilateral trading on the part of market participants. However, prices at these points are not used by PJM with respect to bilateral transactions reported to PJM for inclusion in the PJM billing process.

Prior to June 1, 2010, the RPM Pricing Points were used to settle Non-Unit Specific Capacity Transactions (formerly referred to as financial capacity transactions).

The definition of each of the RPM Pricing Points is provided in this document. If requested by stakeholders, additional pricing points will be added by PJM. However, the definition of a pricing point will remain static once created.

Table 1: Active RPM Pricing Points
